

SLEEP MEDICINE

An International Journal

Aims and Scope

Sleep Medicine focuses primarily on the human aspects of sleep, integrating the various disciplines that are involved in sleep medicine: neurology, clinical neurophysiology, internal medicine (particularly pulmonology and cardiology), psychology, psychiatry, sleep technology, pediatrics, neurosurgery, otorhinolaryngology, and dentistry.

The journal will publish the following types of articles: Reviews (also intended as a way to bridge the gap between basic sleep research and clinical relevance); original research articles; brief communications; controversies; case reports; letters to the Editor; journal search and commentaries; book reviews; meeting announcements; listing of relevant organisations plus web sites (WebWatch).
